

BRAND GUIDE

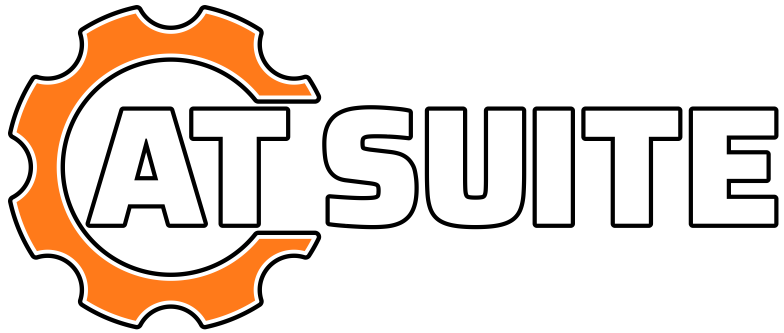

How to use the AT-SUITE logo, colours and app icons. AT-SUITE is the room-control software of the AT family: one app for every room: timers, chat, captions, presenters and screens.

AT-SUITE brand guide · version 1.0 · October 2026 · in-house use

01 THE LOGO AND ITS PARTS

The AT-SUITE logo uses the same build as every AT brand: an orange gear shaped like a C, the letters AT inside it, and the product name, SUIT, to the right. Every part has a thick black outline.

Primary logo (wordmark): gear + AT + SUIT

Icon: gear + AT

Stacked: icon above AT SUITE

HOW THE MARK IS BUILT

- **The gear** is a ring with 8 round notches, one every 45°. The right side is cut open by two straight edges, which turns the gear into a C.
- **The layers**, from outside in: a thick black outline, a thin white band, then the orange body.
- **AT** is set in bold rounded-square capitals, white with a black outline. It sits inside the ring, and the T reaches towards the opening.
- **SUIT** uses the same letters. It is centred on the gear and its cap height is about one third of the gear's height, the same as AT GROUP and AT EVENTS.
- **Lettering** is Saira ExtraBold, converted to outlines. The logo files need no font. Don't retype the logo.

02 THE AT FAMILY

Every AT company uses the same gear and letters. Only the colour of the gear changes. AT-SUITE is orange, a colour no other member uses, so it is easy to tell apart when it appears next to its siblings.

AT GROUP

#0A9EFC

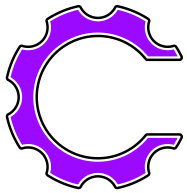

Parent brand

AT SOLUTIONS

#FDD600

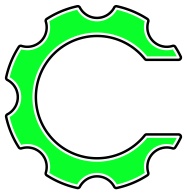

CCTV & networks

AT NET

#9B0AFF

AT EVENTS

#0AFF2A

Events

AT HANDYMAN

#FC05E2

Handyman

AT SUITE

#FF7A1A

Room-control software

WHERE AT-SUITE SITS

AT-SUITE is a product brand. It is the software that AT GROUP and AT EVENTS crews use to run rooms at events. It is not a separate company. On materials that show several brands, put AT GROUP first, at the top or on the left, and give the other brands equal size below it or to the right.

When AT-SUITE appears next to AT EVENTS (for example, on a crew screen), keep both logos the same height and leave at least two A-heights between them.

RULES THAT APPLY TO EVERY MEMBER

- The gear geometry, letter style and black outline never change between brands.
- Each brand keeps its own colour. Never put another member's colour on the AT-SUITE gear.
- The family uses the same plate rule on photos and busy backgrounds: put the logo on a dark navy plate.

03 COLOUR PALETTE

Orange is the AT-SUITE colour. Navy and App Dark are the backgrounds. Black and white are only for the logo outline and letters. The values are also in `colours.json`.

AT-SUITE Orange
`#FF7A1A · RGB 255 122 26`
The gear. Primary accent: buttons, active tabs, highlights and links on dark.

Night Navy
`#0B1020 · RGB 11 16 32`
Brand background: banners, social images, splash screens and the logo plate.

App Dark
`#0E1116 · RGB 14 17 22`
AT-SUITE app UI background (dark theme).

Outline Black
`#000000 · RGB 0 0 0`
Outline of the gear and letters. Always present.

Letter White
`#FFFFFF · RGB 255 255 255`
Letters and the thin band inside the gear outline.

Ember
`#C85400 · RGB 200 84 0`
Pressed / hover state. Use for orange text on white.

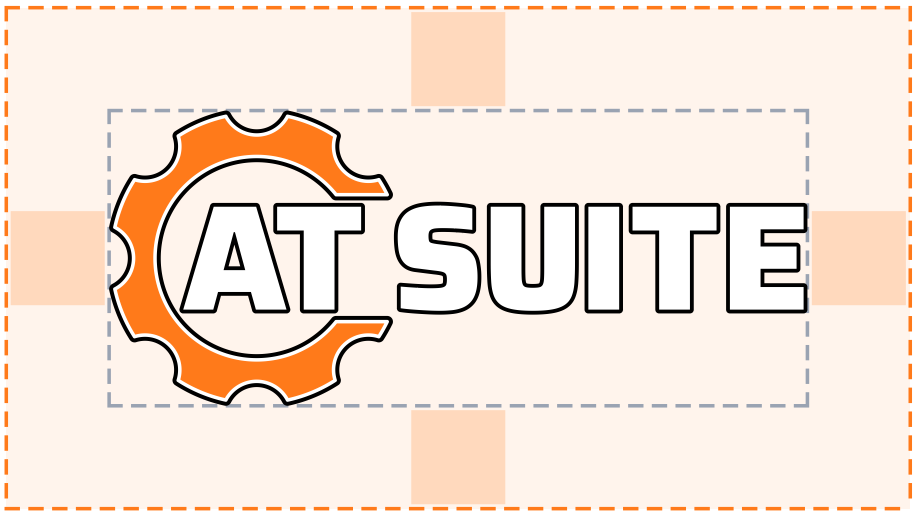

Glow
`#FFB27A · RGB 255 178 122`
Tints and soft highlights on dark UI.

Brand gradient
`#0B1020 → orange 35% glow`
Background for the banner and social images only.

> **Text contrast.** Orange #FF7A1A on navy or App Dark is fine for any size of text. On white, orange only passes for large, bold text. For small orange text on a light background, use Ember #C85400. Never set body text in orange on white.

04 CLEAR SPACE AND MINIMUM SIZES

The unit of measure is **x**, the height of the "A" in the logo. Keep at least **1x** of empty space on every side of the logo. Text, edges, photos and other logos all stay outside this space.

Orange dashed line = the minimum clear area. The shaded squares are 1x.

x = the cap height of the A. For the icon on its own, use the A in the icon. In the wordmark, x is about one third of the gear's height.

MINIMUM SIZES

VERSION	SCREEN	PRINT
Wordmark	180 px wide	40 mm wide
Stacked	120 px wide	25 mm wide
Icon (full detail)	48 px	12 mm
Small app icon	16–40 px	not for print
One-colour icon	24 px	8 mm

Below 48 px, the white band and thin outlines blur together. At those sizes use the simplified small icon (`app/favicon.svg`, `app/tray-16.png`, `tray-32.png`). It has a heavier outline, no white band and a larger AT.

Small icon at 16, 32 and 64 px

05 APPROVED VERSIONS

Use the full-colour logo wherever you can. Because of its black outline, the same file works on both light and dark backgrounds. Use the one-colour versions only when colour is not possible: engraving, stamps, single-colour vinyl, fax or watermarks.

Full colour on dark (preferred)

Full colour on light

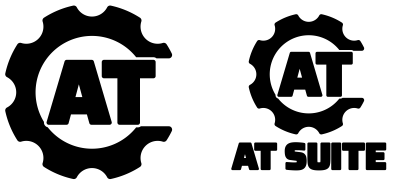

Icon on App Dark #0E1116

One colour, black (light backgrounds)

One colour, white (dark backgrounds)

One-colour icon and stacked versions

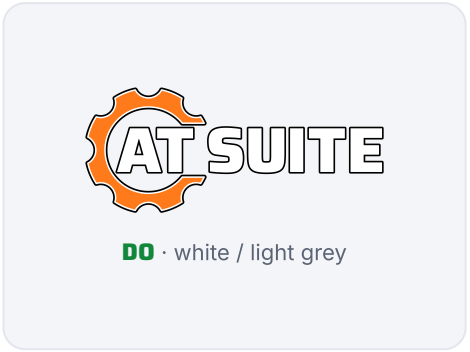

In the one-colour versions, the gear and the letters are each one solid shape, separated by a small gap. These versions come in pure black or pure white only. Don't make them in orange or any other colour.

06 BACKGROUNDS AND PLACEMENT

Navy is the logo's home. On plain dark or plain light backgrounds, place the full-colour logo directly. On photos, video, patterns or anything busy, put the logo on a navy plate (#0B1020, at least 90% opaque) with 1x of padding around it.

PLACEMENT

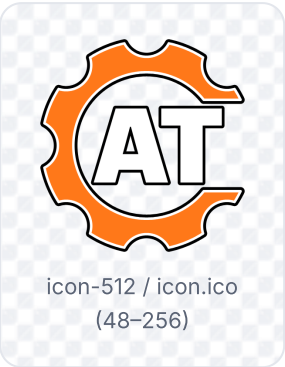

- **Web and app headers:** put the icon or wordmark at the top left, vertically centred in the bar. The usual height is 28–40 px.
- **Room screens and overlays:** place the icon in a corner, no taller than 6% of the screen height. It must never cover the timer, captions or presenter.
- **Documents:** place the wordmark at the top left of the first page, 40–60 mm wide.
- **Banners and social images:** centre the logo on navy, with the orange glow coming from one corner.

MID-TONES AND ORANGE

Mid-grey backgrounds are fine, because the black outline separates the logo from them. Never place the logo on an orange or warm-orange background, because the gear disappears into it. If the background has to be orange, use the white one-colour logo.

07 APP ICON

The app icon is the logo's icon version with no extra plate, so it shows on whatever background the system uses.
Two sources cover every size: the full icon for 48 px and above, and the simplified small icon for 16–40 px.

icon-512 / icon.ico
(48–256)

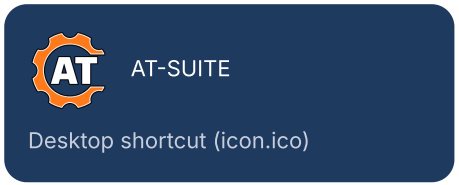

apple-touch-icon
(navy plate)

tray-16, tray-32
(simplified)

RULES

- Use the files as they are. Don't add rounded squares, shadows or gloss. On iOS, the apple-touch-icon already has a navy plate, because iOS fills transparent areas with black.
- On Windows, `icon.ico` contains 16, 24, 32, 48, 64, 128 and 256 px. The 16, 24 and 32 px sizes use the simplified small icon.
- For the PWA / web manifest, use `icon-192.png` and `icon-512.png`.
- On Linux, use `icon-512.png` or `icon-1024.png` for the system tray and the .desktop file.
- Never put a word next to the app icon inside the icon file. The OS shows the app name.

> Web: `<link rel="icon" href="/favicon.svg" type="image/svg+xml">`, with `/favicon.ico` as a fallback and `<link rel="apple-touch-icon" href="/apple-touch-icon.png">`.

08 DO'S AND DON'TS

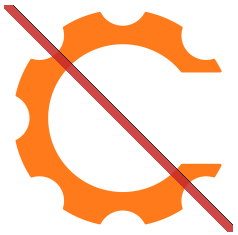

The logo only works if every copy is the same. Always use the supplied files. Never redraw or edit the logo.

DON'T recolour the gear in another family colour (or any other colour)

DON'T stretch, squash or skew the logo

DON'T drop the black outline

DON'T remove the white band (except in the small app icon)

DON'T retype the letters in another font

DON'T colour the letters; they are always white with a black outline

DON'T rotate it or add shadows, glows or bevels

DO use the supplied SVG and PNG files, keep 1x of clear space, use navy as the home background, use the small icon below 48 px, and use the white one-colour version on orange or photos where a plate is impossible.

DON'T rearrange the parts (for example, SUIT above the gear), change the spacing, add a tagline inside the clear space, outline it a second time, or use the old neon "AT Live Caption" style logo for AT-SUITE.

09 FILES: WHICH ONE TO USE

Every file is generated by `branding/make_brand.py`. To fix or update the logo, edit the script and run it again. Don't edit the exported files by hand.

USE	FILE	NOTES
Web page, app header	`logo/atsuit-wordmark.svg`, `logo/atsuit-icon.svg`	SVG scales to any size. Use the transparent versions on dark or light backgrounds.
Print (posters, signs, docs)	`logo/*.svg` (vector), or `atsuit-wordmark.png` (2000 px)	Use the SVG for print shops. They can convert it to PDF/EPS. Black/white one-colour files are for single-ink jobs.
Office documents / email	`logo/atsuit-wordmark.png`, `atsuit-wordmark-on-light.png`	PNG with a transparent background, or with a white plate if the program flattens transparency.
Presentations / video	`logo/atsuit-wordmark-on-dark.png`, `atsuit-stacked-on-dark.png`	Navy plate built in.
Windows app / installer	`app/icon.ico`	Contains 16–256 px. Small sizes use the simplified mark.
Browser tab	`app/favicon.svg`, `app/favicon.ico`	The SVG is the simplified mark. The .ico contains 16, 32 and 48 px.
iPhone / iPad home screen	`app/apple-touch-icon.png` (180)	Navy plate built in.
PWA / Android / Linux	`app/icon-192.png`, `app/icon-512.png`, `app/icon.png` (512), `app/icon-1024.png`	Transparent.
System tray	`app/tray-16.png`, `app/tray-32.png`	Simplified mark.
GitHub	`social/github-social-preview.png` (1280×640), `social/readme-banner.png` (1600×400)	Upload the preview under Settings → Social preview. Put the banner at the top of README.md.
Social media	`social/github-social-preview.png`, `logo/atsuit-icon-on-dark.png`	The icon on navy works as a profile picture. It crops cleanly to a circle.
Colours in code	`colours.json`	Hex and RGB, with where to use each colour.

Lettering: Saira ExtraBold, © 2020 The Saira Project Authors, SIL Open Font License 1.1 (`fonts/OFL.txt`). The logo files contain outlines only. Embedding the font is not needed.
